Career Objective

Computer Science Engineering student focused on software development, with hands-on experience in Python and MERN stack projects. Currently developing strong skills in Java, Data Structures and Algorithms, and Full Stack Development, with an interest in building practical, scalable software solutions and growing as a software developer.

Education

Bachelor of Technology (B.Tech), Computer Science and Networks Engineering (CSN)

Kakatiya Institute of Technology and Science, Warangal

2024 – 2027

Diploma (Polytechnic) in Computer Science Engineering

VMR Pradeep Kumar Institute of Engineering & Technology

2021 – 2024

Secondary School Certificate (SSC)

Suffah High School

2021

Skills

Programming Languages: Java, Python, JavaScript

Core Concepts: Object-Oriented Programming, Data Structures, Algorithms

Web Technologies: HTML, CSS, JavaScript, React.js, Node.js, Express.js

Databases: MySQL, MongoDB

Backend: Flask, Node.js, Express.js, REST APIs

Tools & Technologies: Git, WebSockets, IndexedDB

Projects

Inventory And Billing Management System

- Developed a retail Point of Sale (POS), real-time inventory management, and business intelligence platform for fast-paced retail operations
- Implemented smartphone-based wireless barcode scanning using QR pairing and WebSockets, eliminating the need for dedicated barcode scanner hardware
- Built offline-first functionality using IndexedDB to maintain essential checkout operations during network interruptions
- Implemented client-side branded PDF receipt generation with WhatsApp sharing for faster customer transactions
- Developed a greedy decision-support algorithm for stock optimization and implemented role-based multi-user workspace management
- Engineered an ETL pipeline to migrate legacy retail data from Vyapar SQLite backups into MongoDB

Biometric ATM System

- Developed a Flask-based web application simulating an ATM system with fingerprint-based user authentication
- Implemented user registration, biometric login, balance inquiry, deposits, and withdrawals using Flask and MySQL
- Integrated MySQL using PyMySQL for storing and managing user account and transaction data
- Implemented fingerprint matching through byte-level comparison of uploaded fingerprint image files
- Added client-side form validation using JavaScript and designed the web interface using HTML5 and CSS

Early Technical Exposure & Hands-on Experience

- Gained early exposure to programming and computer systems through diploma-level coursework and laboratory-based learning
- Developed hands-on experience with programming, debugging, development tools, and computer-based problem solving
- Built practical applications by applying programming concepts to real-world use cases
